

IMMEDIATE RELEASE

**Prescott, Arizona – Mar 31, 2008** – Northern Lights Tactical, a leading supplier of mobile robotic systems for range training and tactical applications, has expanded its product line and moved to a new facility.

The TRACS Desert version has all of the capabilities of the original TRACS robotic system along with an enhanced electronic package and desert tan paint. The Desert version includes electronics designed to withstand high-temperature environments and is better able to withstand the fine sand and grit found in desert climates.

The new trailer system for the TRACS robot fulfills the needs of customers that want a towed-target solution. The lightweight trailer can accommodate a wide variety of different targets; 2d, 3d, and drop-down. The rugged construction and quality manufacturing supports even heavy steel silhouettes. Trailers can be hitched together to form a train of towed targets to simulate complex crowd or sniper scenarios. The wide trailer platform can accommodate more than one target and custom configurations can be ordered. Optional side plates can be installed that transform the trailer into a cargo hauler. 250 pounds of cargo can be hauled over both smooth and rough terrain using the TRACS robot with the trailer.

"The expansion of our product line and the move to our new, larger facility allows Northern Lights Tactical to meet the needs of our customers with increased flexibility and shorter delivery times," said Blair Burtan, CEO. "The new trailer system has been the most popular request from our customers. Being able to satisfy their needs with a multipurpose trailer system will open up a whole new series of applications. Our new facility allows us to manufacture more quickly than ever before and to increase our R&D efforts."

All new TRACS products are available for ordering immediately. For more information please visit [www.northernlightstactical.com](http://www.northernlightstactical.com)

About Northern Lights Tactical

Northern Lights Tactical ([www.northernlightstactical.com](http://www.northernlightstactical.com)) was founded in 2003 by Blair Burtan. Northern Lights Tactical's mission is to develop training and tactical-use products for civilian, law enforcement and military applications. The company focuses on multi-use robotic systems that utilize a common platform to meet the needs of a wide variety of robotic applications. The company's product line includes the TRACS robot, a 4-wheel robotic system that can be used as a mobile target on shooting ranges and as a tactical robot for the police and military.
